Major Depression in the National Comorbidity Survey - Adolescent Supplement: Prevalence, Correlates, and Treatment

Mental disorders are the leading cause of years lived with disability worldwide with 40.5% of this burden attributable to major depression. In adolescence, rates of depression increase substantially between 13 and 18 years of age, and the estimated cumulative incidence in this population approximates the adult lifetime prevalence rate.

Using data from a nationally representative sample of adolescents who participated in the National Comorbidity Survey - Adolescent Supplement (NCS-A), a group of researchers led by Dr. Kathleen Merikangas of the National Institute of Mental Health’s Intramural Research Program, evaluated symptoms of DSM-IV major depressive disorder (MDD), mild/moderate MDD, and severe MDD in 10,123 adolescents. Data was collected from adolescents 13 to 18 years old, representing the critical developmental period for the onset of depression.

MDD was highly prevalent in adolescents, whether measured over lifetime (11%) or past year (7.5%). Prevalence rates of MDD increased across adolescence, and females had 2-3 fold greater rates than males. The majority of adolescents with MDD demonstrated severe role impairment and substantial comorbidity with other mental conditions. Although treatment in any form was received by the majority of adolescents with MDD (60.4%), a much lower percentage received disorder-specific treatment (33.9%) or received treatment from the mental health sector (34.9%). “One of the major concerns raised by these findings was the substantial proportion of those with severe major depression who reported a history of suicide attempts, yet many had not received care in either the medical or mental health sectors,” said Dr. Shelli Avenevoli, the lead author, who was involved in the development of the NCS-A. These findings extend the growing evidence regarding the significance of adolescent depression from regional community studies, and national surveys that focused on current depressive episodes in adolescents. The study highlights the clinical and public health need for screening, early identification, early intervention and treatment of MDD during adolescence.

About JAACAP

*Journal of the American Academy of Child and Adolescent Psychiatry (JAACAP)* is the official publication of the American Academy of Child and Adolescent Psychiatry. JAACAP is the leading journal focusing exclusively on today's psychiatric research and treatment of the child and adolescent. Published twelve times per year, each issue is committed to its mission of advancing the science of pediatric mental health and promoting the care of youth and their families. [www.jaacap.com](http://www.jaacap.com)

The journal's purpose is to advance research, clinical practice, and theory in child and adolescent psychiatry. It is interested in manuscripts from diverse viewpoints, including genetic, epidemiological, neurobiological, cognitive, behavioral, psychodynamic, social, cultural, and economic. Studies of diagnostic reliability and validity, psychotherapeutic and psychopharmacological treatment efficacy, and mental health services effectiveness are encouraged. The journal also seeks to promote the well-being of children and families by publishing scholarly papers on such subjects as health policy, legislation, advocacy, culture and society, and service provision as they pertain to the mental health of children and families.

About Elsevier

Elsevier is a world-leading provider of information solutions that enhance the performance of science, health, and technology professionals, empowering them to make better decisions, deliver better care, and sometimes make groundbreaking discoveries that advance the boundaries of knowledge and human progress. Elsevier provides web-based, digital solutions — among them ScienceDirect, Scopus, Elsevier Research Intelligence and ClinicalKey — and publishes nearly 2,200 journals, including *The Lancet* and *Cell*, and over 25,000 book titles, including a number of iconic reference works.

The company is part of Reed Elsevier Group PLC, a world-leading provider of professional information solutions in the Science, Medical, Legal and Risk and Business sectors, which is jointly owned by Reed Elsevier PLC and Reed Elsevier NV. The ticker symbols are REN (Euronext Amsterdam), REL (London Stock Exchange), RUK and ENL (New York Stock Exchange).
